

# High-Performance Private Cloud, Purpose-Built for You

## Hosted Private Cloud

### This is Your Cloud

The Peak 10® Hosted Private Cloud is a high-performance, off-premise private cloud, purpose-built to meet your specific requirements. Your private cloud can be made for production workloads of all sizes and high I/O applications, as well as PCI DSS and HIPAA-compliant environments. Designed with dedicated compute and scalable storage resources, privacy is maximized and the potential for bottlenecks is minimized.

### Straightforward, Dedicated Resources

Your Peak 10 Hosted Private Cloud is built with dedicated compute for your organization's workload. You choose the compute and storage levels that best meet your organization's needs, with the option to layer on additional managed services. Hosted Private Cloud uses only high-performance flash storage, which can be added incrementally as you grow. Our high performance computing can handle virtually any workload. Scalability is limitless if you need it to be, which makes the growth of your environment stress-free.

Peak 10 manages the underlying infrastructure and handles all tasks such as refresh cycles, hardware updates and storage updates — in addition to providing 24/7/365 expert support. You save both on capital expenses and IT staff time, and can count on predictable monthly costs.

### Hosted Private Cloud Use Case Examples

- High-performance databases including Microsoft SQL Server and Oracle Database
- Enterprise Resource Planning
- Customer Relationship Management
- Reporting and Analytics
- Remote Application Hosting
- Development and Test
- Mode 1 / Legacy applications

### Benefits of Peak 10's Hosted Private Cloud

- No infrastructure to purchase or manage
- Predictable monthly cost
- Suitable for demanding production environments and high I/O applications

- HIPAA/HITECH and PCI-compliant
- Easily integrated into a hybrid IT strategy
- High-level security, reinforced by technical controls to meet regulatory and industry standards.
- Bring Your Own Licensing (BYOL)

#### Hosted Private Cloud at a Glance

<b>Compute</b>	<ul style="list-style-type: none"><li>• Dedicated</li><li>• Multiple node configurations to fit your workload</li></ul>
<b>Storage</b>	<ul style="list-style-type: none"><li>• All flash storage</li><li>• Scale quickly</li></ul>
<b>Workload capacity</b>	<ul style="list-style-type: none"><li>• High performance computing which can accommodate virtually all VMs</li></ul>
<b>Scalability</b>	<ul style="list-style-type: none"><li>• Unlimited compute node usage, tailored to fit workload needs</li></ul>
<b>Service level agreement</b>	<ul style="list-style-type: none"><li>• 99.999% availability</li></ul>
<b>Designed and managed with compliance in mind</b>	<ul style="list-style-type: none"><li>• Technical controls and security measures needed to help meet regulatory and industry standards are built in.</li><li>• Easily use Peak 10's infrastructure to assist your organization in meeting your own compliance and security requirements.</li></ul>

Peak 10 solution engineers can work with you to determine how Hosted Private Cloud can best meet your business needs.
