

We've Got You Covered

Recovery Cloud

Make the Peak 10 + ViaWest Recovery Cloud an integral part of your disaster recovery plan to enable reliable recovery of your critical IT systems. The Recovery Cloud provides a highly flexible and easy to implement, industry-leading Disaster Recovery as a Service (DRaaS) solution that ensures rapid recovery of mission-critical applications and data. Recovery Cloud features continuous data protection (CDP) style replication to minimize data loss should a disaster occur.

Built on leading-edge technologies and combined with Peak 10 + ViaWest's expertise in cloud-based disaster recovery, Recovery Cloud enables you to take advantage of a broad range of cloud resources to restore services in the event of an application or entire site failure quickly, securely and regardless of where your production environment is housed.

A Tiered Approach

With organizations maturing at various rates and prioritizing IT applications differently, Peak 10 + ViaWest's Recovery Cloud solutions allow you to choose the most comprehensive DR plans possible at the best price. That's why, as part of our Recovery Cloud product, we offer three levels of secure disaster recovery (DR) tuned to any organization's business environment.

Choose from disaster recovery tiers and use key controls such as DR test frequency, infrastructure size and performance to align your workloads. Your production environment can be housed on-premise, at a Peak 10 + ViaWest data center, or at a third-party location. Build exactly the solution your business requires, and your budget allows.

Peak 10 + ViaWest offers engineering assisted and self-service disaster recovery testing to ensure your organization is prepared. Semi-annual tests with Peak 10 + ViaWest engineers are a great way to establish a sound baseline of recoverability. Conveniently offered through our secure portal, customers can also test on-demand. Self-service testing allows organizations get immediate feedback on the health of the DR plan without impacting production. Peak 10 + ViaWest can also help your organization design a suitable DR test strategy with [Advanced Client Services](#).

Recovery Cloud Benefits:

- An experienced team of disaster recovery services specialists available 24/7/365 to monitor data replication, execute testing and oversee actual recovery processes.
- Flexibility to mix service tiers to match workloads, which puts you in control of your environment.
- On-demand, non-disruptive testing that doesn't interrupt your business critical applications.
- Extended Journaling provides greater choice of application rollback and recovery.
- Continuous Data Protection (CDP) results in less data loss in the event of a failure.
- Flexibility to fit most virtual environments without requiring re-architecture.
- Proven HIPAA and PCI compliant solutions.

With Recovery Cloud you get the resources to build the recovery infrastructure your business requires. You get the flexibility of a solution that works with your production infrastructure. You get the assurance of knowing you can restore your business quickly, to within minutes of an incident. And you get something no other DRaaS provider offers: around-the-clock access to Peak 10 + ViaWest's disaster recovery experts.

Peak 10 + ViaWest solution engineers can work with you to determine the right Recovery Cloud for your business needs.
